JOHN PAUL CAMBIADO

Computer Science Student • Software Developer

Naga City, Philippines • github.com/Poyyy414 • Naga College Foundation

PROFESSIONAL SUMMARY

Motivated and detail-oriented 4thYear Computer Science student with hands-on experience in full-stack development and UI/UX design. Eager to contribute technical skills in software development, quality assurance, and collaborative problem-solving to real-world projects. Proven ability to perform under pressure, demonstrated by placing runner-up in a competitive hackathon environment.

EDUCATION

Bachelor of Science in Computer Science
Naga College Foundation • Naga City, Philippines • 3rd Year (Current)

WORK EXPERIENCE

Quality Assurance Intern (Work Immersion)
QA in Game • Naga City, Philippines • 2-Week Work Immersion

- Conducted functional and regression testing on game software to identify and document bugs and issues.
- Collaborated with development team members to communicate defects and verify fixes.
- Gained practical experience in QA methodologies, test case writing, and software development life cycle (SDLC) processes.

TECHNICAL SKILLS

Languages: C, C++, Python, Java, JavaScript, Typescript
Frontend: React, TypeScript, Flutter
Design Tools: Figma, Lucidchart
Focus Areas: Full-Stack Development, UI/UX Design, Quality Assurance, Solution Architecture

PROJECTS

CarbonWatch — IoT Carbon Emission Monitoring System with AI Predictions
Role: Backend Developer & UI/UX Designer

- An IoT-based system that monitors carbon emissions in real time and uses AI to predict future trends, supporting data-driven environmental decision-making.

OccupAI — Smart Parking System with Deep Learning
Role: Full-Stack Developer & AI Engineer (Backend & Frontend)

- A deep learning-powered parking management system that detects and predicts parking space occupancy, built end-to-end across backend, frontend, and AI models.

SentryMesh — AI-Powered Disaster Response Application
Role: Frontend Developer, UI/UX Designer & Systems Analyst

- An AI-driven disaster response system featuring predictive alerts, safe-route navigation for residents and evacuation centers, and an equity-first approach to rescue prioritization.

MasterBaker — Gamified Baking Learning App
Role: UI/UX Designer, Backend Developer & Systems Analyst

- A gamified mobile learning application that teaches baking skills through interactive lessons and game-based progression mechanics.

EllaQuest — Gamified AI Learning Platform

Role: Backend Developer & Systems Analyst

- An AI-powered learning platform similar to Google Classroom, gamified with quiz-based engagement features like Quizizz to boost student participation.

TipAId — AI Powered Budgeting Assistant App
Role: Full-Stack

- AI-powered assistant that helps users calculate fair tips and split bills instantly.

SentryMesh — AI Powered Disaster Risk Management App
Role: Full-Stack

- AI-powered disaster monitoring platform providing real-time hazard detection, emergency alerts, risk prediction, and rescue coordination.

CoopGuard — AI Powered IoT Monitoring System for Poultry Farming
Role: Full-Stack

- AI-powered IoT poultry monitoring system providing real-time environmental monitoring, welfare detection, alerts, and farm management insights.

ACHIEVEMENTS & AWARDS

1st Mayoral Hackathon — Runner-Up
Placed runner-up among competing teams, demonstrating strong problem-solving, teamwork, and software development skills under a timed competition environment.

ASEAN AI Hackathon — Top 16 Finalist

Ranked among the Top 16 teams in the ASEAN AI Hackathon in Vietnam, advancing to the semifinals in the Climate Change track with an AI-powered disaster response system.

Arduino Day Philippines – Finalist
Recognized as a finalist among participating teams for developing an innovative hardware-based solution using Arduino, showcasing skills in embedded systems and IoT prototyping.

Young Farmers Challenge — Municipal Winner

Won at the municipal level of the Young Farmers Challenge by developing an innovative AI-powered IoT solution for poultry farming and agricultural technology.

Geo AI Hackathon — Semifinalist

Advanced to the semifinals of the Geo AI Hackathon in Thailand, developing an AI-driven solution focused on geospatial technology and real-world challenges.

TEKNOFEST — Semifinalist

Advanced to the semifinals of TEKNOFEST in Turkey, showcasing technical innovation, software development, and problem-solving skills in an international competition.
